Locomotive Dream
Stalled on Tracks

Gene Stoller has been dreaming about trains since he was a boy. His father ran a bustling railroad yard in Dallas and Stoller would tag along, watching steam engines move huge loads of lumber from the local mill and hitching a ride whenever he could.

A lifetime later, Stoller is still dreaming of trains -- Woodburn’s 1785 in particular. For more than 30 years, Stoller has dreamed of putting the old fashioned steam engine back on track and turning it into an excursion train of the old Oregonian Railway route between Woodburn and Silverton.

"I’d like to live to ride on that thing," he said.

Volunteers have been working hard to repair the aging locomotive and Stoller, a local historian, former owner of the Woodburn Independent and vice president of the Oregonian Railway Historical Society, said the job is almost finished.

There’s only one hold up. The train has no place to go. Railroad officials have yet to give permission for the 1785 to run on their railroad tracks. Up until last year, Southern Pacific had a policy against selling

DEADLINES

are terrible things, but they pop up every month without fail. The deadline for each issue of The Trainmaster is the 20th of the previous month. I always try to squeeze in late material, but I can’t guarantee that anything received after the 20th will make it—be warned!

-MC

from the President

Spring is here, flowers are in bloom and the volunteers are coming in out of the sun or the rain to work on equipment and the library.

The 3300 (SP coach-combine), 76 (museum car) and the Mt. Hood (sleeper-lounge) have left for Tillamook. Bob Steele and Associates are inspecting and repairing the cars for service, hopefully later this year. If you are down Tillamook way in the next month or so, you may want to drop by the southernmost blimp hanger at the old blimp station. Bob will probably let you take a squint when you tell him you have "ownership".

Down to business. Because we are having difficulty projecting our income due to the Missoula excursion cancellation, we are slowing our spending program. The Excursion Committee has started from ground zero on destinations and we should be off and running again.

Projected are two unique trips:

July - Newport on SP via Corvallis and Toledo
We will bus people from Toledo to hotels in Newport for a weekend at the beach - What a place!

Labor day - Siskiyou circle trip
Overnight in Grants Pass and Klamath Falls These will run when SP okays them.

The Astoria trip is still on in coordination with the Dixieland Jazz Festival, October 11-13. We have potential car leases in September and November. Mileage buffs attention: A possible Oregon Electric Trip - Maybe not this year but in 1992.

See? What great activities we have in store!! Don't forget the June picnic. Remember last years? Patti Barbour is working on it and she needs a little help. Are we having fun yet? Are we laughing at ourselves for a change?!!

-Chuck Bukowsky

Missoula Trip Railroaded

Amtrak recently informed us that our excursion we had planned for the weekend of the Fourth of July has to be put on hold. The reason for this seems to be the amount of lead time needed to coordinate efforts between Burlington Northern, Montana Rail Link, and Amtrak. 9 months would have been needed to put it together. We are planning the trip for next year, possibly in May.

</table>

Has anybody seen the library’s copy of its Archives Inventories book? It is a loose-leaf binder with lists of items of archival materials. It should remain in the library for use by patrons. It is the library’s only copy. If any one can help us locate the Archives Inventories and return it to the library, we would appreciate it.

We are looking for donations of steel files, shelves and racks for storage of plans, maps, books and manuscripts. We need steel flat files, also known as map files or cabinets, for safe storage of our large drawings and maps. A donation or purchase of good used files at a reasonable price will save the chapter a lot of money, as these are pricey items. Please leave a message for us at Room 1 if you can help us locate these items.

**ROLLING STOCK**

*Richard Gray, Chair*

The engine at Hines, Oregon is waiting for UP Approval to be moved and 2 members will be on their way to the engine in Ketchikan, Alaska to load spare parts upon our own board approval.

Our cars that were damaged; 3300, 600, 76 have gone to Bob Steele and Associates for inspection and repairs. The 6800 is being prepared for the trip to Sacramento with the 4449. We had some minor freeze problem in the B-end restroom and the holding tank is being finished on the A-end. Holding tanks are also installed on the 4461, thanks to Roger White.

We have a new workbench with vise in the 55. We are almost done loading our spare parts into the boxcar. The trailers are looking good, decks have been built and inventory has been neatly sorted. The RDC’s are being cleaned up with the systems restored and we now have room at the north end of the B-unit for machine and tool storage. Windowsills are being installed in the 6200 and the air conditioning equipment for 4461 has been cleaned. An inspection on the Plum Creek is planned for the end of April.

Thank you to all of the tireless helpers that keep things moving at Brooklyn: Peter Rodabaugh, Richard Parks, Roger White, Bob Hoffman, Tony Regghitto, Tom Green, Brad Reese, Frank & Irene Weiler, Ralph Jack, Stan Williams and Chris Lundt.

A special thank you goes to the SP for donating 200' of air pipeline from the carshops. This will enable us to utilize the roundhouse air to operate car jacks, air tools, sandblasting and painting equipment.

Due to technical difficulties, the board of directors and the business meeting minutes will be included in next months issue.
Locomotive
continued from page 1
its branch lines or letting other groups run trains on them. But new owners have softened that policy and Stoller said he's seen some promising signs.

Last year Southern Pacific sold a branch line on the coast to the Port of Tillamook. Tourists flock to ride the town's new excursion train. Stoller said he'd be pleased to use, rent or even buy railroad tracks between Woodburn and Silverton for a similar attraction here.

But Stoller said he's heard railroad officials are not going to close any of their Oregon lines during 1990. But there's always next year, he said. "It's just a matter wait and see," Stoller said.

Steam engines once dominated transportation in America. Towns like Woodburn literally sprang up around the train tracks and entire generations grew up listening for that husky steam engine whistle.

But one by one, steam engines were retired to make way for powerful new diesel electric locomotives. "I remember when the diesel took over," Stoller said. "It took over fast. Whack! And the steam engine was gone."

But the old time locomotives are far from forgotten. Americans have kept a special place in their hearts for the steam engine.

"People are just as smitten with locomotives now as they ever were," he said. "There's just something about them."

Woodburn is no exception. The town rallied together to make way for the 1785 when Stoller and a handful of volunteers swayed Southern Pacific into giving up the engine more than 30 years ago. Over the years, train buffs have coveted the train, replacing worn parts and repairing others. Today, the train is in near running condition. Only a handful of repairs remain.

"It's coming along very well," Stoller said. "It could be made operational just about any time we have the opportunity to run it."

The excursion train could be a blessing for Woodburn, Stoller said. Tourists from all over the valley would come to Woodburn to ride the train. And while they're here, they'd eat in local restaurants and shop in local stores. It would be a boon for the economy, Stoller said.

Other communities would reap similar benefits. The branch line runs from downtown Woodburn east through Mount Angel to Silverton and West Stayton. A spur line branches off from Silverton to Salem. The train would make stops in each town, giving tourists a chance to share their wealth in local restaurants and gift shops.

There's plenty to attract tourists to the valley, Stoller said. Woodburn has its World Berry Museum and a host of historic homes. Mount Angel has its annual Oktoberfest. Silverton's old fashioned business district is thriving. And miles of bountiful farmland and forest fill the gaps between cities.

"It will be successful and it would help to build the area," Stoller said.

-Nikki DeBuse
(Woodburn Independent, November 28, 1990)

40 & 8
Merci Car

In 1949 the French government sent 49 of these cars to the United States in appreciation for the aid to France following World War II. Built between 1872 and 1885, these 12 ton, 29 foot, four-wheeled rail carriages are both exotic and outlandish in appearance. The numbers, 40 & 8, refer to the cargo carried: either 40 troops or eight horses. One confused sergeant was quoted, "I got my 40 artillery-men in the boxcar, Lieutenant, but if you try to put eight of our horses in, somebody's gonna be trampled to death!" The cars went one to each state and then territory of Hawaii.

Each car contained gifts including lace handkerchiefs, paintings, the first motorcycle ever built, children's drawings, Marquis de Lafayette's walking stick, dolls, statues, furniture and desk ornaments. The United States had sent food "Friend Ships" to France.

These are the locations of the Northwest area cars:
CALIFORNIA.....Reading Park, Fresno. Condition unknown.
MONTANA.......Historical Society Building, Helena. Condition good.
OREGON........The Flavel House, Astoria. Condition excellent.
WASHINGTON.....Perry Trade School, Yakima. Restoration 80% complete as of November 1988.
(Railway Age)
Foresight is 20-20

Our February monthly membership meeting program was "Trolley Valhalla", by Al Haij. This featured 8mm films of the Portland Traction interurbans on the Belrose and Oregon City lines. Many, if not all of us, present felt a keen sense of loss at the knowledge that these cars and right-of-ways are lost forever. An oft-heard remark is, "Wouldn't it be great if the city had mothballed the Portland Traction lines, so they could be rebuilt as light-rail?"

Sadly, this sentiment is far from original. While reviewing newspaper clippings, the author came across an article suggesting the very same thing. Part of the vast collection of railroad memorabilia donated to the chapter by the late Miln D. Gillespie were many newspaper clippings of railroad related items. One of these dates from the December 5th, 1951 Oregonian and is headlined "Officials Debate Transit System, Municipal Ownership Proposals". Allow me to share some of the article with you.

"With the Portland transit system in an economic vise, what can be done to solve the problem? There are four possibilities: An end to mass transportation; public ownership; drastic reduction in service; or increased use by the public. One city official (unnamed) expressed horror at the first possibility. He said: "Mass transportation is the lifeblood of a city. It is absolutely essential." Traffic engineer Fred Fowler agreed. Said he, "Mass transportation cannot be allowed to die out."

The accompanying picture of the article shows a Portland Traction Company bus, with a headboard entitled, "Twenty-first". The caption reads: "This scene may become a thing of the past in Portland if transit companies have to throw in the sponge because of decreased patronage and increased costs. Traffic experts say that city mass transportation cannot be allowed to die out".

The article makes no distinction between interurban and bus routes, as at that time, of course, Portland Traction utilized both in its service. Quoting from the article again: "Public ownership is favored by people who believe service should be provided for all, even where it cannot pay for itself. They point to places like the edges of the Oswego district or some Portland outskirts where numerous people need bus transportation but the busses will never pay their way."

The article states that some have suggested that salesmanship would be the answer to declining revenue. To quote: "A special fare would be offered to increase patronage in off-peak hours. It would not be available during peak hours when equipment is loaded to capacity and beyond".

Portland Traction Company president, Gordon Steele, is quoted as replying: "That plan has been tried in various cities all over the country and it doesn't work. Patronage doesn't increase enough to make up for the cut in fares".

As this article is written, Portland's transit officials are planning to rebuild rail routes to Portland's suburbs, including Milwaukie, previously served. The monies required to complete these routes will be vastly larger than that required to rebuild existing right-of-ways. However, the writer of the article spoke true, as he wrote his final paragraph: "The easiest solution to the whole problem is for people who work in one place all day is to ride the busses. They will save money and nervous energy and at the same time help clear up the congestion that threatens to choke downtown Portland and business district, like that of almost every other big city. Will they take the situation seriously and help?" I'll have to scoot now--I like to listen to my favorite radio program while I drive home.

Even 20-20 foresight sometimes is just not enough. Another Oregonian newspaper clipping from the library's file is dated November 16, 1954, and is headlined: "PTC Cites Revenue Loss In Bid To Close Interurban Passenger Runs."

-Nick J. White

...and Congress Puts a Lid on It

(This article is supplemental to last month's about dumping on the BN)

National & Community Service Act passed by Congress in October contains provision which protects Amtrak against legal action due to waste discharge from trains. New law requires 'Amtrak to retrofit cars with full-retention systems by October 1996 or remove from service, subject to available funding. Of 1,409 cars, 527 (mostly Amfleet I and II) are believed to already have proper equipment, and 534 (mostly Superliners) will be so equipped. Remaining 348 cars (mostly Heritage fleet) will be replaced by new equipment and retired.

(-Cinders)

As many of us are already aware, our interests are caught in the crossfire, adversely affecting the ability of the chapter to operate excursions.

Maglev is coming

A feasibility study is underway for a new international airport at Moses Lake, Washington. The former military field will be connected with Sea-Tac Airport by Maglev (magnetically levitated train), eventually to be extended to Spokane.

Also, there is renewed interest in a High Speed Rail system to unite Vancouver, Seattle and Portland. Washington state is only one to receive federal funding for High Speed Rail in the 1990-91 federal budget ($500,000)

(UTU News)

The BN is the largest consumer of diesel fuel in the nation after the US Navy.

(UTU News)
Spokane crews fix cabooses

Some were one step from the scrap yard.
Several couldn't even limp to Spokane on their own wheels.
But after Ed Barron and his crew are through with them, the battered old cabooses sparkle.
"It's a good feeling," he said, eyeing one of the gleaming green rehabilitation projects.
The way he sees it, he's doing right by a link to railroad history.
Barron is Superintendent of the Western Fruit Express train-car repair shop. Early this (last) year, the Burlington Northern Railroad - which owns Western Fruit Express - selected Barron's outfit to renovate part of its aging fleet of cabooses.
By the end of December, 75 will have undergone an extensive mechanical make-over and sprucing up, inside and out. A few of them rolled here from Kansas City. "There have been some headaches," Barron said. "A lot of the suppliers of equipment for cabooses have gone out of business because there has been no demand. So we had to scramble to find some things." Some were 30-year-old burned out hulks. A few had been in wrecks. Those arrived on flat cars or cradled in gondolas. Others were just neglected, tired and dirty. Really dirty.
"You wouldn't have put your pig in there," Barron said. They all got stripped, sandblasted, and painted. They all got new wall liners, toilets, refrigerators, stoves and 97-channel radios. And they all got fitted with new or rebuilt underside parts, including an updated hydraulic shock-absorber that dramatically smooths the ride in the car that some veteran trainmen refer to as the bone-crusher.
Barron declined to discuss the cost of the work.
Many railroad observers had come to consider cabooses an endangered species, another victim of technological change.
Throughout the 80's, they were gradually replaced by electronic sensors the perform some of the caboose-riders safety functions. And railroad-buff publications responded with a spate of sentimental farewell features.
But a Burlington Northern spokesman in Seattle said his railroad never intended to totally do away with them. And he said there are circumstances - short start-and-stop runs in congested areas, for instance - when having a caboose on the back of the train is still advisable.
Many of Burlington Northern's 600 cabooses are in sorry shape, however. So Barron's crew got the call. And the WFE shop, which mostly works on refrigerator cars, quickly geared up for a new challenge.
"They've exceeded our expectations", Barron said. "A lot of the suppliers of equipment for cabooses have gone out of business because there has been no demand. So we had to scramble to find some things."
Still, he's delighted with the finished products. He likes showing them off.
"Everybody's proud," he said.
Each upgraded caboose leaves town wearing a small exterior decal that says the renovation was done in Spokane.
The WFE shop's work has earned raves from train crews and higher-ups as well.
"They've exceeded our expectations".
It is uncertain how many cabooses will be renovated in Spokane. It could be several hundred over the next few years.
Barron says keep 'em coming. "To me, a train looks naked without a caboose," Barron said. "And when I look out at the track and see one of the ones we worked on, well, it's nice."

Why Red and Green?

Ever wonder why things are as they are? Example: Why are railroad signals Green, Yellow, and Red? When did this start? An article in the "Christmas 1990" issue of The Coal Bucket form the Horse-shoe Curve Chapter, NHRS, in Altoona, PA, reminded me that in earliest days of trains, green meant "Stop" and a clear or white light meant "Go". Why, I've never discovered. By the way, this is how the expression "Clear Block" came about.
The clear or white light was not used very long. It seems colored green lenses had a habit of getting broken, or whatever, showing a "clear" or "white" signal when actually the signal was showing a "Go" signal! So, after a few mishaps, someone suggested a change. The "clear" or "white" light should be abandoned.
Now, a new mystery. In a 180 degree turn, green was changed to mean "Go". Then, instead of brown, blue, or any other color, red was chosen for "stop". Sometimes about then, a third light was adopted...a yellow (sometimes more orange) came about indicated "slow" or "caution". So, after all this, my ole mind still asks the question...Why?
Any Ideas?
